AI&SUSTAINABILITY IN VET EDUCATION

POLITEKNIKA TXORIERRI'S Project Workshop

On the 9th of June, all the members from the department of innovation hosted an international project workshop, where all trainers were invited to attend.

During this event, which lasted almost 3 hours, trainers that have participated in projects as the technical experts were asked to describe their experiences, with the aim of motivating other teachers to participate in future projects.

Nevertheless, all the projects were presented through the use of a QR code located in posters with the specific logo of the project. The member of the international team used this method for the workshop to be more dynamic.

During this workshop, Jokin Goioaga, Enaitz Elejalde, and Aitor Rey, as the trainers that participated in the diverse training in the project, explained in detail not only their experience during the trips but also in the creation process of the diverse projects they had to develop inside the project scope.

The project AI&SUSTAINABILITY was one of the best received by the rest of the teachers participating in this event, mainly due to the extensive projects available in the HUB.

Due to the diverse nature of the projects, many trainers were interested in reviewing them for their future inclusion in their classes as part of a challenge for students.

On the other hand, the extensive trainings they received in Turkey and Greece were also engaging and highlighted as points of interest for the audience.

Thanks to Politeknnika Txorierri's trainers' nature of reskilling and upskilling their competencies to improve their classes every year, teachers attending the event were engaged in a discussion on what they learned and how they achieved the results they wanted.

In conclusion, the event was an absolute success to motivate other trainers to participate in projects and also as a dissemination activity for the project itself.
